

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

FLEET STREET AND GOUGH SQUARE, LONDON.

INTRODUCTION.

There are in common use two methods (besides direct computation) of finding the interest on money for short periods, and there are accordingly two kinds of Table for this purpose. One is the old or detached system, which gives for the stated number of days the interest on sums from £1 upwards. Thus, on a series of deposits and withdrawals, each entry has its own statement and answer; each requires a separate reference to the Table, and the sum of all completes the laborious work. The other and better way is the progressive system. Each amount on both sides of the account is multiplied by the number of days it has run; the sum of the products is then taken, and the difference of the sums is an amount the interest on which for one day is the full balance payable; and this may be obtained by a single reference to a Table of Interest on Products. The standard Interest Tables, of both kinds, contain usually a variety of rates, and are referred to accordingly.

There is a third method, not in common use, but known and practised in some banks, and which may be called the commutative method. By a simple and ingenious expedient, rates of interest not constant are changed into a constant rate, by which means a material saving of time and labour is effected.

If a number be multiplied by 5, and if one-tenth of the product be taken, then the number is virtually halved; and conversely, if a number be doubled, and one-tenth of the double be taken, we obtain one-fifth of that number.

Also, if two numbers be multiplied or divided by the same quantity, whether such quantity be whole or fractional, the results are to each other in the same proportion as the original numbers.

Let us now for illustration compare two successions of numbers, the latter being one-fifth of the former:—

We may consider the first series as rates per cent., and in the second we may then remark that the rate of 5 per cent. has for its counterpart unity.

In consequence of this relation the rate of 5 per cent. may be taken as a standard rate at which any sum at profit for one day returns interest for just one day, whereas the other rates below and above the standard will return less or more than one day's interest, according to the standard. For instance, 4 per cent. will return eight-tenths of a day's interest at the standard rate, and 6 per cent. will return one day and two-tenths of a day's interest at the standard rate. The reduced or increased factor for the day being in all cases one-tenth of the doubled rate.

The possibility thus made evident of bringing all rates of interest to one standard, suggests further the convenience of keeping a register of days in accordance with all mutations of interest. Such a register might be nearly in the following form:—

(1)	(2)	(3)	(4)
Day of the Month.	Rate per Cent.	Rates, or Day Factors.	Sum of the Day Factors
1	5	1.0	1.0
2	5	1.0	2.0
` 3	5 5 3	0.6	2.6
		0.6	3.5
4 5 6	3	o·6	3.8
6	3 4	0.4	4.2
7	34	0.7	
7 8	4	0.8	5°2 6°0
9	4	0.8	6.8
οí	41	0'9	7.7
11	4	0.8	7°7 8°5
12	4	0.8	9.3
13	3 1	0'7	10.0
14	2 1	0.5	10.2
15	2	0.4	10.0
&c.		T	,

This will be readily understood, and in practice only the first and fourth columns need be recorded, the daily operation being merely to add one-tenth of the doubled rate to the sum of the day factors as brought on continually. The marginal register shows that, owing to the supposed changes of interest, the 15 actual days give only 10.9 complete interest days. That is to say, £100 invested at the beginning of the month, and subject to mutations of interest as noted, would, in 15 days, return 10.9 days' interest at the standard rate.

This register is not a passing record, useless as an old almanac; but is, on the contrary, of continued service. A deposit of £100 was lodged on the 3rd and withdrawn on the 13th: what interest should it return? The corresponding sums of the day factors are 2.6 and 10.0. The difference of these, 7.4, is the day factor for the intervening period of 10 days; and interest at the standard rate would be returnable for 7.4 days.

So far all is clear, but now comes a difficulty. What if not only the rates but the sums at interest vary during a given period? How shall an account current be dealt with? Just, I say, as is done in the progressive system; only instead of the actual days, use their commuted equivalents. An example will make this plain. The data have been supplied by an experienced banker:—

Balances. Amount.	Days.	Products.	Total Products.	Rate.	Interest.
1,000	10	100,00			
3,000	3	90,00			
100	7 2	7,00			
7,000	2	140,00			
200	5	10,00			
9,000	5 3	270,00			
	_		61,700	at 6 per cent.	10 2 10
700	4	28,00			
1,000	4 3 7	30,00			
800	7	56,00			
			11,400	at 4 per cent.	150
2,000	4	80,00			
3,000	2 6	60,00			
300	6	18,00			
	ł		15,800	at 41 per cent.	1 19 0
1,000	7	70,00			
4,000	10	400,00			
		I	47,000	at 2½ per cent.	3 4 4
800	5	40,00			
1,000	5 4	40,00			
			8,000	at 5 per cent.	1 1 11
34,900	82	1			
	t			Total interest	£17 13 1
	•				I

This is a fair specimen of the progressive method. The final result is obtained by summing the results of five references to as many rates of interest in a large book of tables.

We will now exhibit the same account on the commutative system:—

Balances. Amount.	Commuted Days.	Products.	Rate.
1,000	12.0	120,00	1)
3,000	3.6	108,00	11
100	8.4	8,40	6 per cent.
7,000	2.4	168,00	o per cent.
200	6.0	12,00	1:
9,000	3.6	324,00	V .
700	3.5	22,40	1)
1,000	2.4	24,00	} 4 per cent.
800	5.6	44,80	1)
2,000	3.6	72,00	1)
3,000	1.8	54,00	} 4½ per cent.
300	5'4	16,20	()
1,000	3.2	35,00	2 per cent.
4,000	5.0	200,00	J 2g per cent.
800	5.0	40,00	} 5 per cent.
1,000	4.0	40,00) S per cent.
	Sum	1288,80	Interest, £17. 13s. 1\frac{1}{2}d.

The difference of work in this is not inconsiderable; for instead of five intermediate summations and five separate references, with a final summation, our comparatively small table at one rate, and with a single reference, places the result under the finger.

But this is not all. The following interest account, as actually rendered by a London Office, affords a further illustration of the detached as compared with the commutative method:—

1864.	1 1		l	£ s. d.
Dec. 31. Balance	5≹ per cent.	1,000	26	3 14 9
1865.				_
Jan. 26.	5 , "	1,000	14	1 18 4

March 16.	4 "	1,000	28	3 I 4
April 13.	31 ,,	1,000	3 5	3 I 4 3 7 I 2 6 0
May 18.	4 "	1,000	21	260
June 8.	31 "	1,000	7	0 13 5
" I5.	3 "	1,000	14	130
" 29.	21 ,,	1,000	I	014
" 3o.	y	1,000	41	2 16 1
August 10.	"" 3 "	1,000	7	0116
" I7.	31/2 "	1,000	56	5 7 4
Oct. 12.	4 "	1,000	4	089
" 16.	41 ,,	1,000	4 3	075
" 19.				
" 2.	41 ,,	3,000	17	6 5 9
,, 19.				
" 19.	5 ¹ "	4,000	2	130
" 2I.	6 ,,	4,000	47	30 18 0
» 7·	54 "	4,000	24	13 16 2
" 31.				£82 5 6
			1	202 5 0

By means of the annexed Mutation Register, prepared from this account, the computation may be worked thus:—

Oct. 19.
$$220'1 \times 1000 = 220100$$

Dec. 31. $303'8$
83'7 × 4000 = 334800
Oct. 2. $\frac{19}{17 \times \frac{9}{10}}$ 15'3 × 3000 = $\frac{45900}{600800}$
£82. 6s. od.

Interest Mutation Register of the

for the Year 1865.

In the foregoing examples it may be, and has been objected that they present round numbers and are therefore easy. So they are, but it does not follow that more complex numbers are much more difficult. Here is an account which will speak for itself:—

Messrs. Brown, Jones, and Robinson, in Account with the National Discount Company, Limited.

1867. April I. Balance ,, 2. ,, 2. ,,	2 per cent.	£ s. d. 52,264 8 6 52,055 11 11 47,998 10 5	I I I	£ s. d. 2 17 2 2 17 1 2 12 7

The above is similar to many accounts in our books, and the interest was calculated upon it in six minutes and a half according to our system.

This account looks formidable, and certainly the computer, who, on the detached system worked out the interest in six and a half minutes deserves unqualified praise.

The account on the commutative system is very simple:—

		•	•	
	Rate.	Daily Balances.	Sums. (2 figures cut off.)	Products.

It will be observed that the balance is herein brought on day by day, and that when the rate of interest changes the preceding balances are summed, and the product of the sum and doubled rate entered in an adjacent column. These additional entries should be made from time to time during the currency of the account, and then at the close there would only remain the summation of the products and the finding of the interest in the table. The actual work is manifestly much less than in the former account.

An explanation of the structure of the table may now be offered. In fact, the specialty of the table, its powerful extent, depends wholly on arrangement.

If the reciprocal of a number be added continually, the sum will approach to, and will finally reach unity. Thenceforth the summation from unit to unit may be continued by entering the fractional series in a marginal column, and the integer series in a succession of inner columns. For instance, take the reciprocal of 7.

4	11	18	25	32	39	*5714
5	12	19	26	33	40	*7143

Suppose, now, the value of $\frac{31}{7}$ be required. Looking for 31 in the body of the tablet we find over it the integer 4, and on line with it the fraction '4286. The result sought is therefore 4'4286, and other values may be found in like manner.

The root of the present table is $\frac{365}{5} = 73$; a prime number too large to be conveniently tabulated in one page; and there is, besides this, a subordinate series resulting from the fractions of a pound sterling to be brought into the margin. Thus it became necessary to break the radical series into six pages. This being understood, each column may be viewed as running through six consecutive pages, and the order of the table will be clearly perceived.

The marginal series contains the integer terminal pairs derived from continuous addition of the mixed number 7.60416, expressing the days in which £1 at 5 per cent. interest would yield one farthing.

The number of distinct computations thus packed together is 96,400, which, if printed at length, would occupy 385 pages instead of 60 pages as here given. The principle employed is applicable to many other tables, and its more common adoption would save labour and cost. A compact table saves also the time of the user, and in matters of business time is money.

METHOD OF USING THE TABLE.

- First. Take one-tenth of twice the rate of interest per cent., and call this the commuted interest factor.
- Second. Multiply the days for which interest is due, by the commuted interest factor, and call this the commuted day factor.
- Third. Multiply the amount at interest by the commuted day factor, and point off the tens and units of the product.
- Fourth. Enter the body of the table with the figures above tens, and at the top of the column in which they are found will be seen the pounds; then in the bracketted part at the end of the line find the tens and units, or the nearest to them; even with these are the shillings and pence, and at the top of the column are the farthings. The work is thus completed.

Note.—When the rate is 5 per cent., the commuted day factor is unity. The rule then takes the ordinary form: multiply the amount by the days, and extract for the product, as directed above.

The foregoing rules are for detached operations. If a register of the mutations of interest has been kept, the commuted day factor will be found by subtracting the prior from the latter date number; the factor will thus include all intermediate mutations.

EXAMPLES.

In the arithmetical operations three cases may be noticed—

First. When the product of the days, the doubled rate, and the principal does not exceed 730,000. This case falls within the first part of the Table, pages 2 to 61.

Ex. 1.—The interest on £2,437 for 97 days, at 3 per cent.

$$97 \times 0.6 \times 2437 = 141833.4 = £19.8s.7d.$$

Here the numbers to be sought are 1418 in the body of the Table, and 33 in the marginal bracket.

Ex. 2.—The interest on £3,842 for 83 days, at $7\frac{3}{4}$ per cent.

$$83 \times 1.55 \times 3842 = 494273.3 = £67.14s.2d.$$

Here the reference numbers are 4942 and 73.

Second.—When the product exceeds 730,000, and is below 7,300,000. This case falls within the additional part of the Table.

Ex. 3.—The interest on £45,343 for 121 days, at $4\frac{1}{2}$ per cent.

Third.—When the product exceeds 7,300,000. In this case both parts of the Table are used.

Ex. 4.—The interest on £7,569,324 for 113 days, at $3\frac{1}{2}$ per cent.

Ex. 5.—The four preceding examples in one sum.

		£82781	16	11½
Page 55	597488	81	16	111
Page 64	604307487·8 6037100	=82700		
(3) (4)	598733528.4			
(3)	4937852.7			
(2)	494273.8			

141833.4

Note.—If, owing to the break in the series (as explained in the Preface) any difficulty be at first felt in obtaining the numbers above tens in the first part of the Table, a glance at the Reference Index will show the column in which the number should be sought.

TABLES.

The figures in the body of the Table express products, to be obtained by multiplying the amount by the number of days commuted for rate, as directed.

Interest Table for all Rates per Cent.

The figures in the body of the Table express products to be obtained by multiplying the amount by the number of days commuted for rate, as directed.

30

Interest Table for all Rates per Cent.

Find the figures above tens of the product in the body of the Table. The interest in Pounds will then be seen at the top of the column; and in the corresponding bracket the tens and units of the product, or the nearest to them, will show the Shillings, Pence, and Farthings.

Interest Table for all Rates per Cent.

Find the figures above tens of the product in the body of the Table. The interest in Pounds will then be seen at the top of the column; and in the corresponding bracket the tens and units of the product, or the nearest to them, will show the Shillings, Pence, and Farthings.

Additional Table for large Amounts.

The figures in the body of the Table express products, to be obtained by multiplying the amount by the number of days commuted for rate, as directed. The figures at side and top are Pounds sterling.

Find the residue of the given product, or the sum nearest thereto, in the body of this Tablet. Then on line in the margin will be seen the Shillings, and at the top of the column the Pence to the nearest penny.

64

Additional Table for large Amounts.

The figures in the body of the Table express products to be obtained by multiplying the amount by the number of days commuted for rate, as directed. The figures at side and top are Pounds sterling.
